

Information about the subject

Degree: Bachelor of Science Degree in Marine Sciences

Faculty: Faculty of Veterinary Medicine and Experimental Sciences

Code: 272003 **Name:** Applied Statistics

Credits: 6,00 **ECTS Year:** 2 **Semester:** 1

Module: Transversal Knowledge and Techniques in Marine Sciences

Subject Matter: Statistics **Type:** Compulsory

Department: Basic and Transversal Sciences

Type of learning: Classroom-based learning

Languages in which it is taught: Spanish

Lecturer/-s:

272A

German Martin Gonzalez (**Responsible Lecturer**)

german.martin@ucv.es

Module organization

Transversal Knowledge and Techniques in Marine Sciences

Subject Matter	ECTS	Subject	ECTS	Year/semester
Organisms and Systems	30,00	Marine Botany	6,00	2/2
		Marine Ecology	6,00	3/2
		Marine Microbiology	6,00	2/2
		Marine Zoology	6,00	2/1
		Physiology of Marine Organisms	6,00	2/2
Marine Geology	12,00	Geophysics and Tectonics	6,00	2/1
		Sedimentology	6,00	2/2
Geographic Information Systems and Remote Sensing	6,00	Geographic Information Systems and Remote Sensing	6,00	2/1
Statistics	6,00	Applied Statistics	6,00	2/1

Recommended knowledge

In order to follow the course, it is essential to be able to handle with fluency the basic mathematical techniques that are learned in compulsory and high school.

Learning outcomes

At the end of the course, the student must be able to prove that he/she has acquired the following learning outcomes:

- R1 The student summarizes the information obtained by sampling or experimentation, both in Nature and in the laboratory, adapting the graphs to the types of variables being studied.
- R2 The student distinguishes the different types of statistical variables which may appear in studies related to Marine Sciences, and the type of graph appropriate to represent each variable.
- R3 The student is able to design a suitable procedure for the collection of data (sampling), both on biological populations and in the laboratory, learning to avoid the possible biases that can result from an incorrect data collection process.
- R4 The student is able to obtain confidence intervals for the different population parameters (mean, proportion and standard deviation) as well as to know how to correctly interpret the meaning of a confidence interval.
- R5 The student is able to raise and resolve the different basic statistical contrasts. In particular, he must know the t-test, the chi-square test and ANOVA of a fixed-effect, completely randomized factor.

Competencies

Depending on the learning outcomes, the competencies to which the subject contributes are (please score from 1 to 4, being 4 the highest score):

BASIC		Weighting			
		1	2	3	4
CB2	Students are able to apply knowledge to their work in a professional way and have the competences enabling them to state and defend views and opinions as well as perform problem-solving tasks in their field of study.				X
CB5	Students develop the necessary learning skills to undertake further studies with a high level of autonomy.				X

GENERAL		Weighting			
		1	2	3	4
CG1	Capacity to analyze and synthesize			X	
CG2	Capacity to organize and plan			X	
CG3	Mastering Spanish oral and written communication			X	
CG5	Knowing and applying Basic ITC skills related to marine science				X
CG6	Capacity to manage information (capacity to look for and analyze information coming from different types of sources)				X
CG7	Decision making		X		
CG8	Capacity to work in interdisciplinary and multidisciplinary team			X	
CG10	Critical and self-critical capacity			X	
CG11	Capacity to learn			X	
CG12	Capacity to adapt to new situations			X	

CG13 Capacity to produce new ideas (creativity)

x

CG16 Capacity to apply theoretical knowledge

x

CG18 Sensibility to environmental issues.

x

SPECIFIC

Weighting

1 2 3 4

CE2 Knowing basic sampling techniques of water column, organisms, sediment and sea-bottoms as well as basic techniques of dynamic and structural variable measurement

x

CE6 Applying marine instrument techniques

x

CE7 Collecting, assessing, processing and interpreting oceanographic data, following the most recent theories

x

CE8 Identifying and analyzing new problems and proposing solution strategies

x

CE9 Knowing how to carry out experiments and measurements both in the laboratory and during sample collection

x

CE10 Knowing how to use planning, designing and implementing research tools while surveying and assessing results

x

CE11 Knowing how to do fieldwork and laboratory experiments in a safe and responsible way, promoting teamwork

x

CE12 Describing, classifying and mapping sea bottoms and coastal areas

x

CE13 Looking for and assessing different kinds of marine resources

x

CE20 Mastering practical use of models, including new data for validation, improvement and development of models

x

Assessment system for the acquisition of competencies and grading system

Assessed learning outcomes	Granted percentage	Assessment method
R1, R2, R3, R4, R5	50,00%	Written test with theoretical and practical questions
R1, R2, R3, R4, R5	10,00%	Delivery of guided assignments, whose objectives and contents will be proposed by the teacher
R1, R2, R3, R4, R5	40,00%	Problem-solving and issues related to the use of specific software

Observations

The use of a computer program to analyze data through statistical procedures is essential in experimental sciences. For this reason, the practical part of the evaluation of competences has a value comparable to the evaluation of the theoretical part.

In order to pass the subject, it will be necessary to obtain a minimum score of 4 in the written exam and in the practical test. If the student fails to get the minimum grade required in any of the sections, he/she will not be able to pass the subject even if the weighted average is equal to or higher than 5. In this case, the grade that the student will get in his/her Transcript of Records is 4.5.

MENTION OF DISTINCTION:

According to Article 22 of the Regulations governing the Evaluation and Qualification of UCV Courses, the mention of "Distinction of Honor" may be awarded by the professor responsible for the course to students who have obtained, at least, the qualification of 9 over 10 ("Sobresaliente"). The number of "Distinction of Honor" mentions that may be awarded may not exceed five percent of the number of students included in the same official record, unless this number is lower than 20, in which case only one "Distinction of Honor" may be awarded.

Learning activities

The following methodologies will be used so that the students can achieve the learning outcomes of the subject:

- M1 Teacher presentation of contents, analysis of competences, explanation and in-class display of skills, abilities and knowledge.

- M2 Group work sessions supervised by the professor. Case studies, diagnostic tests, problems, field work, computer room, visits, data search, libraries, on-line, Internet, etc. Meaningful construction of knowledge through interaction and student activity.
- M6 Personalized and small group attention. Period of instruction and/or guidance carried out by a tutor to review and discuss materials and topics presented in classes, seminars, readings, papers, etc.
- M8 Set of oral and/or written tests used in initial, formative or additive assessment of the student.
- M9 Group preparation of readings, essays, problem-solving, seminars, papers, reports, etc. to be presented or submitted in theoretical , practical and/or small-group tutoring sessions. Work done on the university e-learning platform (www.plataforma.ucv.es)
- M10 Student's study: Individual preparation of readings, essays, problem-solving, seminars, papers, reports, etc. to be presented or submitted in theoretical, practical and/or small-group tutoring sessions. Work done on the university e-learning platform (www.plataforma.ucv.es).

IN-CLASS LEARNING ACTIVITIES

	LEARNING OUTCOMES	HOURS	ECTS
ON-CAMPUS CLASS M1	R1, R2, R3, R4, R5	40,00	1,60
PRACTICAL CLASSES M2	R1, R2, R3, R4, R5	15,00	0,60
TUTORIAL M6	R1, R2, R3, R4, R5	3,00	0,12
ASSESSMENT M8	R1, R2, R3, R4, R5	2,00	0,08
TOTAL		60,00	2,40

LEARNING ACTIVITIES OF AUTONOMOUS WORK

	LEARNING OUTCOMES	HOURS	ECTS
GROUP WORK M9	R1, R2, R3, R4, R5	18,00	0,72
INDEPENDENT WORK M10	R1, R2, R3, R4, R5	72,00	2,88
TOTAL		90,00	3,60

Description of the contents

Description of the necessary contents to acquire the learning outcomes.

Theoretical contents:

Content block	Contents
Descriptive Statistics	Description of samples and populations Types of variables Frequency distribution Location and dispersion measurements Representation of experimental data by means of statistical graphs. Description of a population: population parameters
Probability	Introduction to probability. Dependent and independent events: Bayes' Theorem Random sampling: types and characteristics Discrete and continuous probability distributions
Sample distribution. Confidence intervals	Distribution in the sample. Confidence intervals Sample distribution: mean, variance, proportion. Distribution in sampling of the difference of sample means: paired and independent samples. Obtaining and interpreting confidence intervals for different population parameters. Determination of the sample size.
Hypothesis contrasts	Hypothesis contrasts: stages. Types of errors in a contrast Test t, test Z, and test chi ² . Assumptions for applying these tests Concept of p-value: calculation and meaning

ANOVA

Analysis of the variance of a factor
ANOVA's fundamental relationships: the F test
Assumption to apply ANOVA
Multiple Comparison Procedures

Organization of the practical activities:

	Content	Place	Hours
PR1.	Descriptive statistics	Computer	4,00
PR2.	Confidence intervals	Computer	4,00
PR3.	t test, ch2 test, Z test and ANOVA	Computer	7,00

Temporary organization of learning:

Block of content	Number of sessions	Hours
Descriptive Statistics	8,00	16,00
Probability	3,00	6,00
Sample distribution. Confidence intervals	4,00	8,00
Hypothesis contrasts	9,00	18,00
ANOVA	6,00	12,00

Addendum to the Course Guide of the Subject

Due to the exceptional situation caused by the health crisis of the COVID-19 and taking into account the security measures related to the development of the educational activity in the Higher Education Institution teaching area, the following changes have been made in the guide of the subject to ensure that Students achieve their learning outcomes of the Subject.

Situation 1: Teaching without limited capacity (when the number of enrolled students is lower than the allowed capacity in classroom, according to the security measures taken).

In this case, no changes are made in the guide of the subject.

Situation 2: Teaching with limited capacity (when the number of enrolled students is higher than the allowed capacity in classroom, according to the security measures taken).

In this case, the following changes are made:

1. Educational Activities of Onsite Work:

All the foreseen activities to be developed in the classroom as indicated in this field of the guide of the subject will be made through a simultaneous teaching method combining onsite teaching in the classroom and synchronous online teaching. Students will be able to attend classes onsite or to attend them online through the telematic tools provided by the university (videoconferences). In any case, students who attend classes onsite and who attend them by videoconference will rotate periodically.

In the particular case of this subject, these videoconferences will be made through:

Microsoft Teams

Kaltura

Situation 3: Confinement due to a new State of Alarm.

In this case, the following changes are made:

1. Educational Activities of Onsite Work:

All the foreseen activities to be developed in the classroom as indicated in this field of the guide of the subject, as well as the group and personalized tutoring, will be done with the telematic tools provided by the University, through:

Microsoft Teams

Kaltura

Explanation about the practical sessions:

The practical sessions are carried out in the same way as the theoretical ones: they are self-evaluations with problems that the student has to solve through R

2. System for Assessing the Acquisition of the competences and Assessment System

ONSITE WORK

Regarding the Assessment Tools:

The Assessment Tools will not be modified. If onsite assessment is not possible, it will be done online through the UCVnet Campus.

The following changes will be made to adapt the subject's assessment to the online teaching.

Course guide		Adaptation	
Assessment tool	Allocated percentage	Description of the suggested changes	Platform to be used
Solve problems using the R statistical program	30	It is intended to give more importance to the work done during the course	UCVnet
Solving problems using a calculator	30	It is intended to give more importance to the work done during the course	UCVnet
Delivery of works and self-assessments both theoretical and practical, through the R program	40	It is intended to give more importance to the work done during the course	UCVnet

The other Assessment Tools will not be modified with regards to what is indicated in the Course Guide.

Comments to the Assessment System:

The final test will be unique, with a self-assessment that will have two parts: a part that will consist of exercises to do using a calculator, more theoretical, and a practical part to do using R. The intention is that in case of confinement, the work becomes more important diary
