

## Information about the subject

Degree: Bachelor of Science Degree in Speech and Language Therapy

Faculty: Faculty of Psychology

Code: 1171102 Name: Functional anatomy of the organs of speech and hearing II

Credits: 6,00 ECTS Year: 1 Semester: 2

Module: Basic Training

Subject Matter: Phisiology Type: Basic Formation

Field of knowledge: Health sciencies

**Department:** Speech Therapy

Type of learning: Classroom-based learning

Languages in which it is taught: Spanish

Lecturer/-s:

1171A <u>Maria Rosario Valles Fuster</u> (Responsible Lecturer)

mariarosario.valles@ucv.es

## Module organization

#### **Basic Training**

| Subject Matter       | ECTS  | Subject                                                         | ECTS | Year/semester |
|----------------------|-------|-----------------------------------------------------------------|------|---------------|
| Phisiology           | 12,00 | Functional anatomy of the<br>organs of speech and<br>hearing II | 6,00 | 1/2           |
|                      |       | Fundamentals of<br>Neuroscience                                 | 6,00 | 1/2           |
| Anatomy              | 6,00  | Functional anatomy of the<br>organs of speech and<br>hearing I  | 6,00 | 1/1           |
| Psychology           | 36,00 | Basic Psychological<br>Processes                                | 6,00 | 1/1           |
|                      |       | Developmental<br>psychology                                     | 6,00 | 1/1           |
|                      |       | Psycholinguistics                                               | 6,00 | 2/1           |
|                      |       | Psychology of Education                                         | 6,00 | 2/2           |
|                      |       | Psychology of language development                              | 6,00 | 1/2           |
|                      |       | Research Methodology                                            | 6,00 | 2/1           |
| Clinical linguistics | 6,00  | Linguistics applied to speech and language therapy              | 6,00 | 1/1           |

### Recommended knowledge

The students will have previously taken the subject "Functional anatomy of the organs of the language and hearing I", so they will already be familiar with the anatomical nomenclature and have acquired a broad and unitary knowledge of the organization and functioning of the human body, absolutely essential for the understanding of this subject.

## Learning outcomes

At the end of the course, the student must be able to prove that he/she has acquired the following learning outcomes:

| R1 | To identify the different anatomical structures involved in hearing.                                                                       |
|----|--------------------------------------------------------------------------------------------------------------------------------------------|
| R2 | To know the respiratory system as a structure of fundamental importance for the elaboration of voice, speech and language.                 |
| R3 | To describe the functional anatomy of the oral and nasal cavities, larynx, and musculature involved in voice emission.                     |
| R4 | To understand the functional integration of the anatomical structures involved in hearing and the production of voice, speech and language |
| R5 | the production of veroe, opecon and language.                                                                                              |

To know and relate the macroanatomy of the nervous system with its functionality and some physiological characteristics.

## Competencies

Depending on the learning outcomes, the competencies to which the subject contributes are (please score from 1 to 4, being 4 the highest score):

| BASIC |                                                                                                                                                                                           | Weighting |  |   |   |   |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|--|---|---|---|
|       |                                                                                                                                                                                           | 1         |  | 2 | 3 | 4 |
| CB3   | Students have the ability to gather and interpret relevant data usually within their field of study to inform judgments that include reflection on relevant social, scientific or ethical |           |  |   | x |   |
| CB4   | Students can communicate information, ideas, problems and solutions to both specialist and non-specialist                                                                                 |           |  |   | X |   |
| CB5   | Capacity to develop those learning skills needed to undertake further studies with a high degree of autonomy                                                                              |           |  |   |   | X |

| SPECIFIC |                                                                                                                                                                                                                                                                                                          | Weighting |   |   |   |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|---|---|---|
|          |                                                                                                                                                                                                                                                                                                          | 1         | 2 | 3 | 4 |
| CE1      | Understand and integrate the biological foundations of Speech:<br>Anatomy and Physiology                                                                                                                                                                                                                 |           |   |   | X |

| CE33     | Final project involving transversally applicable material; to be carried out in association with different subjects                                                                                                                                                                                      |           | x |   |   |
| CE37     | Master the terminology that allows one to interact effectively with other professionals                                                                                                                                                                                                                  |           |   |   | x |
| CE47     | Know and be able to integrate the biological (anatomical and<br>physiological), psychological (and evolutionary development<br>processes), linguistic and pedagogical foundations of speech<br>therapy intervention in communication, language, speech, hearing,<br>speech and non-verbal oral functions |           |   |   | X |
| CE54     | Manage communication technologies and information                                                                                                                                                                                                                                                        |           |   | x |   |

| TRANSVERSAL |                                                                                                                 | Weighting |   |   |   |  |
|-------------|-----------------------------------------------------------------------------------------------------------------|-----------|---|---|---|--|
|             |                                                                                                                 | 1         | 2 | 3 | 4 |  |
| CT1         | Use the techniques of verbal and nonverbal communication in order to optimize relevant communicative situations |           |   | x |   |  |
| CT7         | Having an open and flexible attitude to lifelong learning                                                       |           |   | x |   |  |
| CT8         | Know and use of technical advances in the exercise of their profession                                          |           |   |   | x |  |

# Assessment system for the acquisition of competencies and grading system\_\_\_\_\_

| Assessed learning outcomes | Granted percentage | Assessment method                                              |
|----------------------------|--------------------|----------------------------------------------------------------|
| R1, R2, R3, R4, R5         | 50,00%             | Written exam                                                   |
| R1, R2, R3, R4, R5         | 35,00%             | Practical work assignments assessment                          |
| R1, R2, R3, R4, R5         | 15,00%             | Attendance and participation of in-person formative activities |

#### Observations

WRITTEN TEST: 50%Multiple choice tests (50%): multiple choice tests with one of the five possible correct answers. Provide a deeper understanding of the content learned by the student and prepare him to deal with this assessment model

ASSESSMENT OF PRACTICES: 35% Anatomical imaging tests (10%): exam in which the student must identify the anatomical structures previously observed in classOral test (10%): oral exam in which the student answers the questions asked by the teacher, verbally explaining the knowledge he has acquired and allowing interaction with the teacherFinal portfolio (15%): individually, students design a document presenting it to be evaluated by the teacher. It will consist of an anatomical atlas of the structures studied in the subject.

ATTENDANCE AND PARTICIPATION: 15%

Attendance to class (3%): It will never exceed 5% of the final grade.Class participation (12%): the teacher evaluates participation and progress in the acquisition of knowledge and skills by students during masterclasses and practicesCRITERIA FOR THE GRANT OF HONOR REGISTRATION:To obtain it, a grade equal to or greater than 9, participation in all class activities and final work of the subject with the highest grade of the class. Also, and in accordance with the general regulations, you can only give an honorary registration for every 20 students not for a fraction of 20, with the exception of the case of groups of less than 20 students in total, in which you can give an enrollment.

In accordance with the regulations governing the assessment and grading of subjects in force at UCV, the distinction of "Matrícula de Honor" (Honours with Distinction) may be awarded to students who have achieved a grade of 9.0 or higher. The number of "Matrículas de Honor" (Honours with Distinction) may not exceed five percent of the students enrolled in the group for the corresponding academic year, unless the number of enrolled students is fewer than 20, in which case a single "Matrícula de Honor" (Honours with Distinction) may be awarded.

Exceptionally, these distinctions may be assigned globally across different groups of the same subject. Nevertheless, the total number of distinctions awarded will be the same as if they were assigned by group, but they may be distributed among all students based on a common criterion, regardless of the group to which they belong. The criteria for awarding "Matrícula de Honor" (Honours with Distinction) will be determined according to the guidelines stipulated by the professor responsible for the course, as detailed in the "Observations" section of the evaluation system in the course guide.

## Learning activities

The following methodologies will be used so that the students can achieve the learning outcomes of the subject:

OS

| M1 | On-Campus Class               |
|----|-------------------------------|
| M2 | Practical Class               |
| M3 | Seminar                       |
| M4 | Laboratory                    |
| M5 | Individual Work               |
| M6 | Group Work                    |
| M7 | Work Exhibition               |
| M8 | Clinical Case Analysis        |
| M9 | Prácticas en clínicas y centr |
|    |                               |

#### **IN-CLASS LEARNING ACTIVITIES**

|                                                                                                                                                                                                                                                                                      | LEARNING OUTCOMES  | HOURS | ECTS |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|-------|------|
| ON-CAMPUS CLASS. Teacher presentation of contents, analysis of competences, explanation and in-class display of skills, abilities and knowledge M1, M8                                                                                                                               | R1, R2, R3, R4, R5 | 24,00 | 0,96 |
| PRACTICAL CLASSES. Group work sessions<br>supervised by the professor. Case studies,<br>diagnostic tests, problems, field work, computer<br>room, visits, data search, libraries, on-line,<br>Internet, etc. Meaningful construction of<br>knowledge through interaction and student | R1, R3, R4         | 12,00 | 0,48 |
| M2, M8                                                                                                                                                                                                                                                                               |                    |       |      |
| GROUP WORK EXHIBITION. Application of multidisciplinary knowledge                                                                                                                                                                                                                    | R4                 | 6,00  | 0,24 |
| SEMINAR. Supervised monographic sessions with shared participation                                                                                                                                                                                                                   | R4                 | 6,00  | 0,24 |
| OFFICE ASSISTANCE. Personalized and small<br>group attention. Period of instruction and/or<br>orientation carried out by a tutor to review and<br>discuss materials and topics presented in<br>classes, seminars, papers, etc.<br>M5, M6, M8                                         | R1, R2, R3, R4, R5 | 9,00  | 0,36 |
| ASSESSMENT. Set of oral and/or written tests<br>used in initial, formative or additive assessment<br>of the student<br>M5, M8                                                                                                                                                        | R1, R2, R3, R4     | 3,00  | 0,12 |
| TOTAL                                                                                                                                                                                                                                                                                |                    | 60,00 | 2,40 |

|                                                                                                                                                                                                                                                                                      |                    |       |      |

#### LEARNING ACTIVITIES OF AUTONOMOUS WORK

|                                                                                                                                                                                                                                                                                        | LEARNING OUTCOMES  | HOURS | ECTS |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|-------|------|
| GROUP WORK. Group preparation of readings,<br>essays, problem solving, seminars, papers,<br>reports, etc. to be presented or submitted in<br>theoretical lectures, practical and/or small-group<br>tutoring sessions. Work done on the university<br>e-learning platform<br>M6, M7, M8 | R1, R2, R3, R4, R5 | 36,00 | 1,44 |
| INDEPENDENT WORK. Student study:<br>Individual preparation of readings, essays,<br>problem solving, seminars, papers, reports, etc.<br>to be presented or submitted in theoretical                                                                                                     | R1, R2, R3, R4, R5 | 54,00 | 2,16 |
| sessions. Work done on the university e-learning                                                                                                                                                                                                                                       |                    |       |      |
| platform<br>M3, M5, M7, M8                                                                                                                                                                                                                                                             |                    |       |      |
| TOTAL                                                                                                                                                                                                                                                                                  |                    | 90,00 | 3,60 |
|                                                                                                                                                                                                                                                                                        |                    |       |      |

## Description of the contents

Description of the necessary contents to acquire the learning outcomes.

#### Theoretical contents:

Content block

Contents

1.- ANATOMY OF HEARING. PHYSICAL STUDY OF SOUND. HEARING.

•**Topic 1:** Outer and middle ear. Pinna. Ear canal. Tympanic membrane. Tympanic cavity. Middle ear bones: malleus, incus and stapes. Joints, muscles. Eustachian tube. Mastoid cells. Inner ear. Cochlea. Vestibule and semicircular canals. Internal auditory canal.

•**Topic 2:** Physical study of sound. Characteristics of sound waves.The outer and middle ear. Functions. Physiology of the eardrum-ossicular chain. The middle ear as impedance adapter. Air and bone transmission of sound.

•**Topic 3:** Transmission of sound waves, mechanical vibration cochlea. Organ of Corti: morphofunctional aspects. Tonotopic organization. Auditory pathway. Information systems and acoustic vestibular. Auditory cortical areas. Acoustic tract injuries.

## Course guide

#### Year 2024/2025 1171102 - Functional anatomy of the organs of speech and hearing II

## 2.- FUNCTIONAL ANATOMY OF RESPIRATION

3.- FUNCTIONAL ANATOMY OF PHONATION •**Topic 4:** The respiratory system: general concepts on respiration. Organs of the respiratory system and their functional significance. Structure and morphology of the lower passageway: trachea, bronchi and bronchial tree. Contents of the thoracic cavity, pleura and pleural cavity. Lungs. Mediastinum.

•**Topic 5:** Muscles of respiration. Primary muscles of inspiration: the diaphragm. Anatomy of the diaphragm. Diaphragmatic mechanics. Accessory muscles of inspiration. Expiratory muscles: abdominal muscles. Expiration control. Accessory muscles of expiration.

•**Topic 6:** Respiratory Physiology. The measurement of respiration. Structure-function of the respiratory system. Respiratory cycle: pulmonary ventilation, pulmonary pressures and flows. ypes of breathing: clavicular breathing, thoracic breathing, diaphragmatic breathing. Ventilation. Transport of respiratory gases. Control of breathing. Lung volumes and capacities. External and internal respiration.

•**Topic 7** - Anatomical elements of the larynx. Hyoid bone and laryngeal cartilages. Ligaments and membranes. Intrinsic and extrinsic muscles.

•**Topic 8** - Anatomy of the vocal folds. Body-cover model. Theories of phonation. Aero-elastic theory. Mechanism of phonation. Vocal cycle. Changes in the vocal folds by hormonal action throughout life.

•**Topic 9** - Laryngeal functions: Role in speech: vocal attack, termination, sustained phonation. The classification of the voices. Vocal registers. The chest voice and the passage of the voice: glottal fry, falsetto. Frequency, tone and pitch changes. Vocal intensity and intensity changes. Clinical considerations.

## Course guide

#### Year 2024/2025 1171102 - Functional anatomy of the organs of speech and hearing II

## 4.- FUNCTIONAL ANATOMY OF ARTICULATION AND RESONATION

#### 5.- FUNCTIONAL ANATOMY OF MASTICATION AND SWALLOWING

•**Topic 10** – Concept of resonance and articulation. Resonators and organs articulators (I). Cavities of the vocal tract. Nasal passages and sinuses. External nose. Nasal cavities: Regions of the nasal cavities. Sense of smell.

•**Topic 11 -** Resonators and articulator (II). Oral cavity. Tongue. Muscles of the tongue. Muscles of facial expression

•**Topic 12 -** Resonators and articulators (III). Pharynx. Division: rhino-pharynx, oropharynx, laryngopharynx. Pharyngeal wall. Muscles of the soft palate.

•**Topic 13** - Source-filter theory. Physiology of articulation and resonation. Speech function: lips, mandible, tongue, velum. Development of articulatory ability. Development of the vocal tract. Coordinated articulacion. The mouth as a resonant cavity: timbre, coverage and voice projection. The pharynx as a resonant cavity, *voce di gola*. The sinuses as a resonant cavity.

•**Topic 14** - Anatomy and physiology of mastication and swallowing: Temporo-mandibular joint. Masticatory muscles. Biomechanics of mastication. Dentition: dental development, dental occlusion. Salivary glands: parotid, submandibular and sublingual glands. Physiology of swallowing. Description of the three phases of swallowing.

#### Temporary organization of learning:

| Block of content                                           | Number of sessions | Hours |  |
|------------------------------------------------------------|--------------------|-------|--|
| 1 ANATOMY OF HEARING. PHYSICAL STUDY OF SOUND.<br>HEARING. | 7,00               | 14,00 |  |
| 2 FUNCTIONAL ANATOMY OF RESPIRATION                        | 6,00               | 12,00 |  |
| 3 FUNCTIONAL ANATOMY OF PHONATION                          | 6,00               | 12,00 |  |
| 4 FUNCTIONAL ANATOMY OF ARTICULATION AND RESONATION        | 8,00               | 16,00 |  |
| 5 FUNCTIONAL ANATOMY OF MASTICATION AND<br>SWALLOWING      | 3,00               | 6,00  |  |
